

CUSTOMIZE & STABILIZE YOUR NITROGEN

HYDREXX® Professional NitrogenStabilizer™ is a fertilizer additive that allows applicators to stabilize their own liquid urea-based nitrogen source at the rate they choose for short- to medium-duration feeding.

COMPLETE COMPATIBILITY

Because you control the performance, you can adjust HYDREXX to specifically match your conditions and needs: Higher rates for sandier soils or longer performance; lower rates for heavier soils or shorter length of performance. With HYDREXX you are in complete control.

HYDREXX is also compatible with most fungicides, herbicides, insecticides and plant growth regulators*. Melted urea and UAN solutions mixed with HYDREXX can be stored for up to 12 weeks without affecting performance.

*Compatibility testing should still take place prior to use.

COMPLETELY BENEFICIAL

- You get extended, consistent nitrogen response and exceptional color
- HYDREXX with soluble fertilizer is more cost efficient than standard slow-release nitrogen sources
- You control the length of performance
- It maintains consistent response regardless of soil temperature
- It reduces "flush" growth
- With less risk of leaching or loss to the atmosphere, HYDREXX is environmentally friendly
- Available in 20 oz. Stabil-Pak or 50 lb. box

COMPLETELY EFFICIENT

"Two years ago I started using HYDREXX in one of my sprayer trucks. I used less Nitrogen and it stayed greener longer. I now use HYDREXX in all of my sprayer trucks."

*Dave Moore
Owner, Ferta-Lawn*

HYDREXX
PROFESSIONAL NITROGEN STABILIZER

YOU CONTROL THE PERFORMANCE. YOU CONTROL THE RESPONSE.

HYDREXX is a proprietary formulation of two unique enzyme inhibitors in a soluble concentrate to provide better response and greater efficiency for liquid urea fertilizers. This liquid urea fertilizer treated with HYDREXX has quick response, superb color, long lasting performance, and is more environmentally sound. The StabilizedNitrogen Technology in HYDREXX is proven to provide better results in every category.

IMPROVED NITROGEN EFFICIENCY

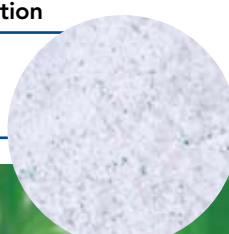

HYDREXX puts the power of StabilizedNitrogen Technology in your hands with a dry, soluble additive for melted urea and UAN solutions. Now you can have the cost efficiency and quick green-up of liquid urea and the long-lasting, consistent color and quality of stabilized nitrogen in one product. HYDREXX can enhance the performance of any liquid- or water-soluble fertilizer with a base of Urea or UAN.

University research has shown that up to 30 percent of urea nitrogen can be lost to the atmosphere within days of application due to ammonia volatilization. Further loss occurs due to leaching and denitrification.

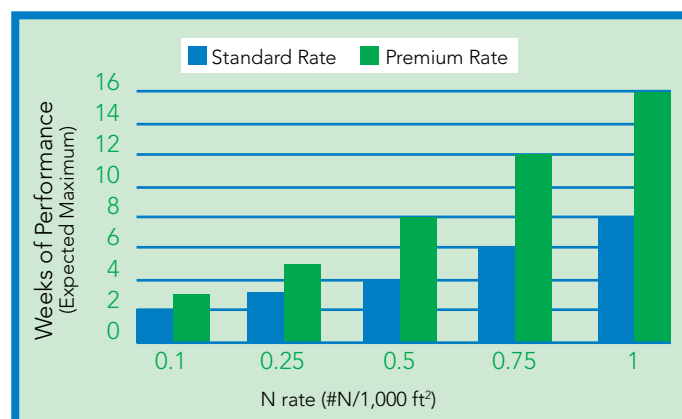

HYDREXX stabilizes nitrogen by combining two enzyme inhibitors that prevent leaching and loss to the atmosphere. By adding HYDREXX to your spray tank, nitrogen is held in a usable ammonium form longer, making it available to the plant for extended periods and every one of your fertilizer applications more efficient. Because you control the rate of HYDREXX, you can also choose to stabilize your nitrogen for intervals to suit any fertility program or soil type.

HYDREXX PRODUCT SPECIFICATIONS

Product	Uses	Classification
HYDREXX	Added to liquid urea or UAN solution to stabilize the urea nitrogen. For spray application.	Nitrogen Stabilizer

EXPECTED LENGTH OF PERFORMANCE BY RECOMMENDED RATE

HYDREXX FOR TURF APPLICATION

UREA					
Delivery Rate	Ounces per Lb.	Ounces per 50 Lbs.	Pounds per Ton	Volatility Protection	Approximated Color Response*
Standard	0.20	10	25	7 days	6 - 8 weeks
Premium	0.40	20	50	14 days	12 - 16 weeks
UAN					
Delivery Rate	Ounces per Gallon	Pounds per Ton	Volatility Protection	Approximated Color Response*	
Standard	0.72	8.25	7 days	6 - 8 weeks	
Premium	1.44	16.50	14 days	12 - 16 weeks	

* These estimates are based on an application rate of 1#Nitrogen/1,000 square feet and can be affected by outside factors. The response length may be shorter in sandier soils, and longer in heavier soils. It is recommended that you run a trial of various rates of HYDREXX to optimize performance for your particular site.
