

# CD-Rom Artwork Specifications

**The CD-Rom:** 4.5 diameter with a 5/8 inch center hole

**Unprintable areas:**

Area between: 1.375 and 1.25 circles (shown in black below)

Center hole: 5/8 in diameter.

To create a template for this artwork, the artist should start by drawing four circles: 4.5", 1.375", 1.25" and .625". All of the circles should be centered at the same point. This will create a template similar to the one below. The artist should take in consideration when designing the cd artwork that the black areas below are not printable. The inner white circle can contain image, but words and finer design elements should all lay within the outside larger white circles area.

Vector images should be used whenever possible for all logos and text. Other image files (tifs, jpegs, gif, etc.) may appear pixilated from the screen printing process.
