

J&D Manufacturing

LEADERS IN MOVING THE WORLD'S AIR

Evaporative Cooling

Maintain maximum comfort and production levels even in extreme heat conditions with our J&D Manufacturing Evaporative Cooling Systems. This system is designed to enhance your ventilation system with the simple concept of evaporative cooling while offering you superior quality.

Features

Distribution and Return System

- Largest self contained PVC return gutter on the market today.
- Optional open top feature allows quick and easy management of the system, ensuring pads are being wet properly.
- Stainless steel and PVC construction maximizes functionality and durability—safeguards your investment
- Stainless steel end caps
- Submersible pumps
- Automatic float matches water supply with cooling demands
- Easy cleaning and pad removal
- Easy shut down for seasonally affected environments
- High efficiency system
- Water filter, shutoff, flush valve and bleed-off included in the plumbing package
- Standard galvanized (optional stainless steel) gutter supports

Pads

- J&D Manufacturing's Cell Pad has been specially designed and coated for effective evaporation and long term durability.
- 6" deep, long lasting pads on our systems
- Formulated to spread water over the surface as a film rather than droplets.
- Surface dries quickly in absence of water, inhibiting growth of micro-organisms.
- Non-porous surface inhibits algae and minerals from attaching and fall off when dry.
- The edges are tough and durable, allowing repeated cleaning.
- Improved life expectancy over standard pads.

Available with open or close top
