

**1st APPLICATION**  
**March thru early May**

**2nd APPLICATION**  
**Mid-April thru July**

**3rd APPLICATION**  
**June thru September**  
**or Anytime**

**4th APPLICATION**  
**Late Aug. thru Nov.**

- Prevents crabgrass and fertilizes in one application
- Season-long crabgrass control
- Non-staining - no staining on sidewalks or driveways
- Controls many annual weedy grasses
- Includes slow release nutrients for long-lasting feeding

- Contains VIPER® herbicide, which controls dandelion, chickweed, knotweed and many other broadleaf weeds
- Controls over 200 broadleaf weeds and fertilizes in one application
- High active ingredient for premium weed control
- Includes slow release nutrients for long-lasting feeding

- Thickens and promotes a lush green lawn
- Promotes rich green color
- Apply anytime to grow a healthy lawn
- Formulated to prevent surge growth
- Includes slow release nutrients for long-lasting feeding

- Prepares lawn for winter
- Improved spring green-up
- Promotes a strong lush lawn
- Higher rate of potash increases disease and drought resistance
- Increases carbohydrates for a winter-hardy lawn
- Includes slow release nutrients for long-lasting feeding

# MAXLAWN

## PREMIUM FERTILIZER

Fertilizer is thought of as something which, when applied to the soil, makes plants grow better. Lawn fertilizers contain three primary plant nutrients: Nitrogen, Phosphate, and Potash.

### NITROGEN:

Gives dark green color to plants and promotes increased leaf and stem growth. Feeds decomposition of organic material.

### PHOSPHORUS:

Stimulates early root formation and growth. Gives rapid and vigorous start to plants and winter hardiness to fall seeding.

### POTASH:

Increases disease resistance to plants. Essential to the formation and transfer of starches, sugars, and oils. Helps development of root system.

### FERTILIZER ANALYSIS

# 22-0-4

N	P	K
Nitrogen	Phosphorus	Potash

**FERTILIZE TURF TO IMPROVE COLOR, DENSITY, UNIFORMITY AND RESISTANCE TO TRAFFIC AND DISEASE.**
