

Game Bird Feeds

Prince has a tradition of success in feeding both domestic and wild species of birds. Our game bird feeds are designed to meet the nutritional needs of different classes of birds, including starter feeds, grower feeds and breeder feeds. The nutrient guarantees for game bird feeds may look similar across many manufacturers, however our game bird feed is also based upon the specifically chosen ingredients and manufacturing techniques.

Multiple Protein Sources

Many companies balance diets for methionine and lysine, the first two amino acids to limit production in corn soybean based diets. However, game birds eat a multitude of items including insects and grains. In addition to corn and soybean meal used by most companies, Prince feeds include ingredients such as porcine meat and bone meal, alfalfa meal and linseed meal. These other ingredients help to supply other essential amino acids, key fatty acids and highly digestible minerals, allowing for maximum production whether in growth or egg production.

Locked Formulas

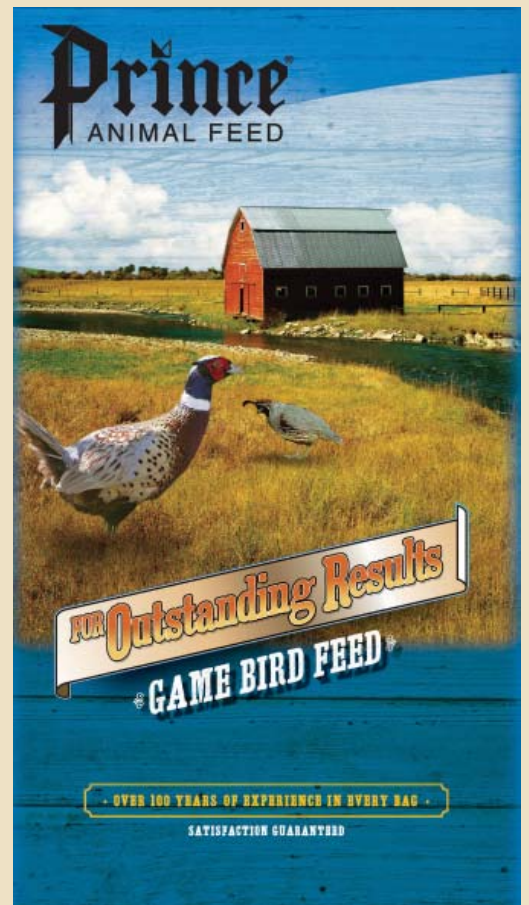

Prince does not vary its formulations based on least cost formulation. Beyond that, we only purchase ingredients from sources with a history of providing consistent high quality products. By providing consistent high quality feed ingredients we encourage good feed consumption and steady animal production.

Manufacturing Technique

Prince operates its' pelleting equipment at temperatures that have been shown to maximize digestibility of pellets and crumbles versus those products manufactured at either cooler or warmer temperatures. By improving digestibility, along with the correct nutrient content, we can maximize production either as growth or egg production. This better digestibility helps to make Prince Game Bird Feeds a great value!

Fun Fact:

Birds, like dogs and cows, do not sweat to cool their body, they must pant to remove excess body heat.

Fun Fact:

Many quail chicks are precocial, which means relatively mature and mobile from the moment of hatching, so can leave the nest with their parents.

Prince Game Bird products are designed as complete feeds. In addition to the “macro-nutrients” listed below, Prince Game Bird products have the added vitamins and trace minerals needed to support growth, a healthy immune system and a strong skeletal system, and where appropriate eggshell quality.

Nutrient	28% Game Bird Starter	24% Game Bird Grower	19% Game Bird Layer
Crude Protein (min) %	28	24	19
Lysine (min) %	1.60	1.40	1.00
Methionine (min) %	0.58	0.50	0.50
Crude Fat (min) %	2.00	3.00	4.30
Crude Fiber (max) %	5.00	6.50	3.50
Calcium %	1.2 - 1.6	1.0 - 1.4	2.7 - 3.3
Phosphorus %	0.95	0.80	0.70
Salt %	0.45 - 0.75	0.30 - 0.60	0.40 - 0.60
Form	Crumble	Crumble or Pellet	Pellet

Feeding Directions: All game bird feeds are a complete ration and can be fed on a free choice basis. Grit may be provided at the producers discretion.

Key Features

- **28% GAME BIRD STARTER** - Crumble screened to a smaller size to assure feed intake by young birds. Nutrient dense to support strong early growth, which both improves efficiency and reduces morbidity and improve mortality.
- **24% GAME BIRD GROWER** - Grower is available as either a crumble, or “mini” pellet for reduced feed loss in floor feeding. Supports growth of skeletal system as well as muscle development.
- **19% GAME BIRD LAYER** - Based upon university recommendations, Game Bird Layer is designed to support strong egg production in both pheasants and quail. Pelleted to reduce feed wastage in floor pen feeding situations.
