

Enviro-Prep[®] Chemical Stripper

Strips the paint and neutralizes the lead.

Removal of leaded paints with paint strippers will create sediment that may contain lead that leaches in excess of the RCRA toxicity characteristic (5.0 mg/L) defining it as hazardous waste and the expense of removal and disposal associated with it. Lead has been identified in structural steel, bridges, light poles, heavy equipment, storage tanks, water towers, concrete, asphalt, ship/platforms and industrial structures.

Render Lead in Paint Non-hazardous

Enviro-Prep[®] Chemical Stripper uses a patented treatment chemistry that converts lead to a highly insoluble inorganic compound. The chemical dosage can be tailored to cost-effectively treat any level of lead in paint to less than the RCRA toxicity characteristic (5.0 mg/L) or the Universal Treatment Standard (0.75 mg/L). The treated material remains stable under all "real world" and standard laboratory leaching tests.

Easy Field Application

Treatment with Enviro-Prep[®] Chemical Stripper can easily be applied with brushes and/or rollers or sprayed on. Following an initial review of current lead levels (if available) and any project-specific issues, an application thickness can be determined. Enviro-Prep[®] Chemical Stripper is then applied in the recommended thickness. No special protective equipment is needed beyond what is normally required for painting or stripping paint. Because Enviro-Prep[®] Chemical Stripper is water-based and pH neutral, it does not create worker contact, wastewater, or material handling problems.

Proven Technology

The Enviro-Prep System[®] has cost-effectively treated lead-impacted sediments in hundreds of applications across the United States.

Product Advantages

One Step Process. By incorporating Enviro-Prep[®] with a paint stripper we have combined a two-step process into one simple effective step for removing and neutralizing lead-based paint.

Cost Savings. Paint treated with Enviro-Prep[®] Chemical Stripper is *non-hazardous* and can be managed as a RCRA Subtitle D solid waste. This results in significant cost savings from reduced testing, transportation, disposal and manifest tracking costs.

Dust and Odor Control. Use of Enviro-Prep[®] Chemical Stripper does not create nuisance dust or odors that are characteristic of other treatment methods.

Environmentally Sound. Treatment with Enviro-Prep[®] Chemical Stripper eliminates a hazardous waste stream, resulting in an improved public image.
