CMP 2000 CALF MILK PASTEURIZER

- Fully Automated Cooling/Pasteurize Process
- Simple Operation, Easy to Clean, Proven Dependability
 - "Batch Style"-No clogging or build-up

**Pasteurizes with proven technology
Eliminates the Johnes Bacteria**

Benefits of the CMP 2000

- Low operating/maintenance costs.
- More included options than any other pasteurizer on the market.
- One complete unit cools, holds & pasteurizes milk in the same tank
- Tested and proven to reduce harmful pathogens and bacteria.

We have had great success with the DDS CIP (Clean In Place) unit. It works great with the pasteurizers making sure that they are cleaned after every use. We also use the CIP to wash all of our bulk tanks, mix tank, and milk lines. With up to 12 washes a day, the CIP has been a great money saver on both chemicals and water.

The pasteurizers have been great assets to our business. We are currently feeding around 1200 wet calves by pasteurizing antibiotic milk that we receive. Feeding antibiotic milk has greatly helped our rate of gain and overall health of the calves. It is a thanks to the DDS batch pasteurizers that we feel comfortable feeding the antibiotic milk. The pasteurizers are very easy to run, allowing our help to maintain daily functions with ease. The pasteurizers are equipped with chart readers so I am able to monitor the process at any time.

"We milk 180 plus cows, we've had our pasteurizer for 2 years now. We are very happy with the investment we made into the pasteurizer. There's no milk replacer to mess with and we've seen a great improvement in the health of our calves. We highly recommend Darlington Dairy Supply for the outstanding customer service they provide!
